                     /clone_lib="Phoma-infected"
                     /note="Vector: pBluescript SK(-); Young trifoliate leaves
                     of Medicago truncatula were excised and dip-inoculated in
                     a spore suspension of Phoma medicaginis, and incubated in
                     humid dishes. Pools of leaves were harvested at 0, 15, and
                     30 minutes and 1, 2, 3, 6, 14, 24, 48, 72, and 96, hours,
                     and used to prepare total RNA. cDNA was prepared from
                     polyA+ enriched, pooled samples of equivalent amounts of
                     total RNA from each sample. The cDNA was directionally
                     ligated into the Uni-Zap XR vector (Stratagene) and
                     packaged using the Gigapack III Gold packaging extracts.
                     Phagemids containing cDNA inserts were in vivo excised
                     from the recombinant Uni-ZAP XR vector using ExAssist
                     helper phage and the E. coli strain XL1-Blue MRF'
                     (Stratagene). Excised plasmids were plated using SOLR
                     cells."

COMMENT     COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
            and products; all new functional assignments courtesy of Monica
            Riley; added promoters, protein binding sites, and repeated
            sequences described in reference 1. The unique numeric identifiers
            beginning with a lowercase 'b' assigned to each gene (protein- or
            RNA-encoding) are now designated as gene synonyms instead of
            labels. This should allow them to be searched for in Entrez as gene
            names.

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 136; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the

```
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
```

```
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 138; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data.  Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
```

and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'b' assigned to each gene (protein- or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene names.

```

XX
CC The DNA encodes the Salmonella AgfA protein. The DNA and isolated
CC proteins are used in genetic immunization and vaccine compositions,
CC respectively, to elicit an immune response to Salmonella in animals (e.g.
CC food producing animals) and humans. (Updated on 25-MAR-2003 to correct PN
CC field.)

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 134; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

CC   The present invention describes a recombinant agfA gene (I) where a
```

CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 138; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response

```
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

XX
PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.
CC   (Updated on 25-MAR-2003 to correct PF field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/tissue_type="Roots of 8 day old 'Bragg' supernodulating mutant NTS382 seedlings"
/dev_stage="8 days old"
/lab_host="DH10B"
/clone_lib="Gm-c1080"
/note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: XhoI; The mRNA was isolated from roots of 8 day old 'Bragg' supernodulating mutant NTS382 seedlings that were infected with Bradyhizobium japonicum, strain USDA 110, 72 hours prior to harvest. Dr. Gary Stacey generously donated the tissue. The roots were flash-frozen in liquid nitrogen. Stratagene's cDNA Synthesis Kit (catalog number 200401) was used to synthesize the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An 'anchor' nucleotide (V=A, C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAGAGAACTAGTCTCGAG(T)18V] to anchor the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with cloned Pfu DNA, ligated to EcoRI adapters and subsequently phosphorylated. The cDNA was then precipitated and redissolved in sterile, RNase-, DNase-free water. The XhoI site within the first- strand synthesis primer was then restricted by digestion with XhoI from Promega (40U/ul); all XhoI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500bp cutoff, using Sephacryl S-500 High Resolution (Pharmacia Biotech) in a 2-mm diameter column and a bed volume of approximately 1ml. The column eluent was precipitated, redissolved, and ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) vector that has been digested with EcoRI and XhoI, and phosphorylated by Stratagene). This library was constucted in the laboratory of Dr. Paul Keim and Dr. Virginia H. Coryell at Northern Arizona University."

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 134; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native

```
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   New isolated peptide capable of binding a mammalian plasma protein,
PT   useful in the manufacture of a medicament for the prevention and/or
PT   treatment of a bacterial infection, such as Escherichia coli, Salmonella
PT   or Shigella infections.
XX
PS   Disclosure; Page 41-42; 42pp; English.
XX
CC   The invention relates to an isolated peptide capable of binding a
CC   mammalian plasma protein or of generating an immune response in a mammal
CC   selected from sequences shown in ABR82642, ABR82648-49. The peptide or
CC   antibody is useful for treating a bacterial infection in a human or
CC   animal or in the manufacture of a medicament for the prophylactic
CC   treatment of a bacterial infection, such as Escherichia coli, Salmonella
CC   or Shigella infection. The peptide that is immobilized on a solid support
CC   is also useful as a reagent for determining the ability of a plasma
CC   protein to bind to bacteria. The present sequence represents an E. coli
CC   15 kDa protein encoding DNA

PT   New fibronectin binding protein curlin from E. coli - used for the
PT   treatment of infections caused by E. coli and for immunisation against E.
PT   coli infection.
XX
PS   Disclosure; Fig 2; 33pp; English.
XX
CC   The fnbA gene of E. coli cattle fecal isolate AO12 includes DNA encoding
CC   a new fibronectin binding protein (FBP), curlin, which is produced as
CC   curli pili when expressed in E. coli (pFnb20) DSM 4585. The fnbA gene
CC   sequence from pFnb20 is given in AAQ62647, and includes the sequence
CC   encoding the 17 kDa curlin subunit (amino acids 21-142 of AAR52664).

PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
```

CC family Enterobacteria. It can also be used to provide proteins and
CC antibodies which can be used for assays. The nucleic acid sequence can be
CC used to provide probes or primers which can specifically hybridise to
CC nucleic acid molecules from greater than 99% of Salmonella strains that
CC are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC correct PF field.)

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 134; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAP) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 137; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 136; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

COMMENT     COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (25-OCT-2001) Submitted on behalf of the Salmonalla
            sequencing team, Sanger Centre, Wellcome Trust Genome Campus,
            Hinxton, Cambridge CB10 1SA, UK
COMMENT     E-mail: parkhill@sanger.ac.uk
            Notes:
            Details of S. typhi sequencing at the Sanger Centre are available
            on the World Wide Web.
            (URL, http://www.sanger.ac.uk/Projects/S_typhi/).

JOURNAL Submitted (13-OCT-1998) Laboratory of Genetics, University of Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT This sequence was determined by the E. coli Genome Project at the University of Wisconsin-Madison (Frederick R. Blattner, director). Supported by NIH grants HG00301 and HG01428 (from the Human Genome Project and NCHGR). The entire sequence was independently determined from E. coli K12 strain MG1655. Predicted open reading frames were determined using GeneMark software, kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA, 30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with CG Site Nos., unique ID nos. for the genes in the E. coli Genetic Stock Center (CGSC) database at Yale University, kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.biology.yale.edu). Annotation of the genome is an ongoing task whose goal is to make the genome sequence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli Genome Project's World Wide Web site (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and its annotations are periodically updated; this is version M54. No sequence changes. Annotation updates: updated gene identifications and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'b' assigned to each gene (protein- or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene names.

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 135; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the

CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

PS   Disclosure; Page 134; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
```

```
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PS   Disclosure; Page 136; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 138; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/tissue_type="Roots of 8 day old 'Bragg' supernodulating mutant NTS382 seedlings"
/dev_stage="8 days old"
/lab_host="DH10B"
/clone_lib="Gm-c1080"
/note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: XhoI; The mRNA was isolated from roots of 8 day old 'Bragg' supernodulating mutant NTS382 seedlings that were infected with Bradyhizobium japonicum, strain USDA 110, 72 hours prior to harvest. Dr. Gary Stacey generously donated the tissue. The roots were flash-frozen in liquid nitrogen. Stratagene's cDNA Synthesis Kit (catalog number 200401) was used to synthesize the cDNA. First-strand synthesis was performed with 5-methyl dCTP, hence the ligated cDNA was hemimethylated. A modification of Stratagene's first-strand synthesis primer was used. An 'anchor' nucleotide (V=A, C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAGAGAACTAGTCTCGAG(T)18V] to anchor the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with cloned Pfu DNA, ligated to EcoRI adapters and subsequently phosphorylated. The cDNA was then precipitated and redissolved in sterile, RNase-, DNase-free water. The XhoI site within the first- strand synthesis primer was then restricted by digestion with XhoI from Promega (40U/ul); all XhoI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500bp cutoff, using Sephacryl S-500 High Resolution (Pharmacia Biotech) in a 2-mm diameter column and a bed volume of approximately 1ml. The column eluent was precipitated, redissolved, and ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) vector that has been digested with EcoRI and XhoI, and phosphorylated by Stratagene). This library was constucted in the laboratory of Dr. Paul Keim and Dr. Virginia H. Coryell at Northern Arizona University."

COMMENT     COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
            and products; all new functional assignments courtesy of Monica
            Riley; added promoters, protein binding sites, and repeated
            sequences described in reference 1. The unique numeric identifiers
            beginning with a lowercase 'b' assigned to each gene (protein- or
            RNA-encoding) are now designated as gene synonyms instead of
            labels. This should allow them to be searched for in Entrez as gene
            names.

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 136; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the

CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 134; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
```

```
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 138; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response

CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.
CC   (Updated on 25-MAR-2003 to correct PF field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     /clone_lib="Phoma-infected"
                     /note="Vector: pBluescript SK(-); Young trifoliate leaves
                     of Medicago truncatula were excised and dip-inoculated in
                     a spore suspension of Phoma medicaginis, and incubated in
                     humid dishes. Pools of leaves were harvested at 0, 15, and
                     30 minutes and 1, 2, 3, 6, 14, 24, 48, 72, and 96, hours,
                     and used to prepare total RNA. cDNA was prepared from
                     polyA+ enriched, pooled samples of equivalent amounts of
                     total RNA from each sample. The cDNA was directionally
                     ligated into the Uni-Zap XR vector (Stratagene) and
                     packaged using the Gigapack III Gold packaging extracts.
                     Phagemids containing cDNA inserts were in vivo excised
                     from the recombinant Uni-ZAP XR vector using ExAssist
                     helper phage and the E. coli strain XL1-Blue MRF'
                     (Stratagene). Excised plasmids were plated using SOLR
                     cells."

COMMENT     COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
            and products; all new functional assignments courtesy of Monica
            Riley; added promoters, protein binding sites, and repeated
            sequences described in reference 1. The unique numeric identifiers
            beginning with a lowercase 'b' assigned to each gene (protein- or
            RNA-encoding) are now designated as gene synonyms instead of
            labels. This should allow them to be searched for in Entrez as gene
            names.

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 136; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the

CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 134; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
```

CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

XX
CC   The present invention describes a recombinant agfA gene (I) where a
```

```
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 138; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response

```
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.
CC   (Updated on 25-MAR-2003 to correct PF field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.
